GREEN O₂ Contest

WHERE GREEN MEETS RESEARCH: YOUR SPACE FOR IDEAS AND OXYGEN

The contest is aimed at students from the GREENO2 project's partner universities and is dedicated to developing innovative solutions for rainwater collection and management using the green roof of a gazebo, in conjunction with a small bio-lake to be built in Rome's Monte Ciocchi Park.

Example image of the gazebo

Participants are invited to propose creative and sustainable ideas that allow for:

- Collect and reuse rainwater from the gazebo roof,
- feed and maintain the ecological balance of the bio-lake,
- encourage oxygen generation and biodiversity,
- transform the gazebo into a space for dialogue, research, and outdoor learning.

Example rendering of the biopond
at Monte Ciocchi Park (Rome)

Contributions may be submitted in the form of:

- Short videos (15–30 seconds),
- design concepts, sketches, or graphic designs,
- innovative ideas accompanied by a brief description.

The contest represents a concrete opportunity to contribute to the creation of an integrated green roof, water harvesting, and biolake system, demonstrating how Nature-Based Solutions can improve urban resilience and quality of life.

The best proposals will be showcased at a public event in the future green gazebo, offering participants the opportunity to present their ideas to citizens, experts, and stakeholders.
